Multiple options are available, we strongly recommend that you use more than one as your security verification method, in case one of your methods becomes unavailable.

Text messaging: Choose to send yourself text messages to your mobile device. For more information about setting up text messaging, see Set up text messaging as your verification method.

Email address: Choose to use an alternate email address that can be used without requiring your forgotten or missing password. This only works for password reset, not as a security verification method. For more information about setting up an email address, see Set up an email address as your verification method.

Security questions: Choose to set up and answer pre-defined security questions set up by your administrator. This only works for password reset, not as a security verification method. For more information about security questions, see Set up security questions as your verification method.
